

THE FUTURE OF LIFT CABIN SANITATION

Choose from Accel Lift's range of compact lift cabin sanitiser solutions, developed to be retrofitted to most elevators or used in other small spaces.

The range offers a variety of measures to sanitise the lift cabin either by;

- Adopting **nano slow-release disinfection technology**, with sterilization efficiency $\geq 99\%$ and disinfection efficiency $\geq 98\%$. This solution is designed with large air volume, to ensure the rapid disinfection of polluted air in the lift car.
- The use of **HEPA filters** in conjunction with **UVC lighting** where the use of a mechanical ventilation device with centrifugal motor and HEPA filter combine with an activated charcoal membrane that carries out a continuous air sanitization and instantaneous ventilation of the lift car.

Our team of Lift Experts have assembled a range of hygiene management support measures for all budgets. For further information on these resources, please contact a member of our team on service@accel.ie or call **+353 1 490 4555**
